Java Output / Print

❮ Previous Next ❯

Print Text

You learned from the previous chapter that you can use the `println()` method to output values or print text in Java:

Example

Get your own Java Server

```
System.out.println("Hello World!");
```

Java If...Else
Java Switch
Java While Loop
Java For Loop
Java Break/Continue
Java Arrays

Java Methods

Example

```
System.out.println("Hello World!");
System.out.println("I am learning Java.");
System.out.println("It is awesome!");
```

Try it Yourself »

Double Quotes

Text must be wrapped inside double quotations marks `""`.

If you forget the double quotes, an error occurs:

Example

```
System.out.println("This sentence will work!");
```

```
System.out.println(This sentence will produce an error);
```

Java Methods

The Print() Method

There is also a `print()` method, which is similar to `println()`.

The only difference is that it does not insert a new line at the end of the output:

Example

```
System.out.print("Hello World! ");
System.out.print("I will print on the same line.");
```

Try it Yourself »

Note that we add an extra space (after "Hello World!" in the example above) for better readability.

In this tutorial, we will only use `println()` as it makes the code output easier to read.
